

2D Implications of the new Energy Performance of Buildings Directive

- Energy Performance Certificates are one of the most visible outcomes of EPBD
 - They need to be **readable** for the user and provide **reliable** information
 - Unfortunately there are still issues mainly with the reliability
 - More controls or higher sanctions might help to build trust
- There are good practices to be shared among member states:
 - Such as: visualization, content of the EPCs, recommendations for building upgrade, capabilities of EPC registry...
- New EPBD brings Smart Readiness Indicator (to be developed)
 - It should remain voluntary, should have link to EPC but should not change the nature of EPCs
 - Also the other possible certification like environmental or sustainability (Level(s)) should remain voluntary and undistruptive to EPCs
