INDUSTRY AND TRADE

Actual awareness of energy savings

- ➔ Actual challenge - try to change the awareness of energy savings
- ➔ It is very frequent that obtain subsidies is main motivation to implement energy saving measures
- ➔ This condition causes relatively strong pressure from the EU
to the achievement of the targets for energy savings at the national level (till 2030 - 27% ?, 30% ??, 40% ???)

Motivation to save energy

- ➡ Energy-saving projects should be created "naturally", the main motivation for those who will invest in energy-saving project is that it's "worth"
- ➡ Subsidies should only be supplementary in cases where it is appropriate to emphasize some parts of technical solutions
- ➡ Energy savings would become in the near future a natural part of life and every person would have enforce it
